itc · IMMERSIVE SOUND SYSTEM

TS-CJ00R

3D Space Positioning System Software V3.074

The itc TS-CJ00R is a 3D Space Positioning System Software V3.074 from itc's Immersive Sound System range, built for object-based immersive audio in theatres, exhibitions, theme venues and premium auditoriums.

Highlights include ultra-high frequency carrier communication technology, cooperate with the audio system, view the status information and the location information and free protocol configuration.

Key features

- Ultra-high frequency carrier communication technology — Realize accurate positioning and tracking of multiple targets
- Cooperate with the audio system — Realize automatic soundtracking
- View the status information and the location information
- Free protocol configuration — Support secondary development to compatible with other immersive sound solutions
